was subject to a denial of service attack and has been disabled

### **Transformer Wikipedia**

February 18th, 2019 - A transformer is a static electrical device that  
transfers electrical energy between two or more circuits A varying current  
in one coil of the transformer produces a varying magnetic flux which in  
turn induces a varying electromotive force across a second coil wound  
around the same core Electrical energy can be transferred between the two  
coils without a metallic connection between the
