Solid propellants AP HTPB composite propellants

February 8th, 2019 - where the burning rate is usually expressed in cm s^{-1} or in s^{-1} and the chamber pressure p is in MPa or psia The constants a and n are called as the temperature coefficient and pressure exponent respectively The equation holds for all commonly used homogeneous and composite propellants

Electrolysis of iron in a molten oxide electrolyte

January 4th, 2018 - The stability of magnetite indicates that iron oxide is composed of both ferrous and ferric iron at the considered electrolysis temperature The combination of these two ions is a major obstacle to implement electrochemical reactions as the electrical current flows by electronic conduction with electrons hopping from one valence state to another

Journal of Nanomaterials Hindawi Publishing Corporation

February 17th, 2019 - Abstract Application of silica nanoparticles as fillers in the preparation of nanocomposite of polymers has drawn much attention due to the increased demand for new materials with improved thermal mechanical physical and chemical properties
